

Enabling Banking Success for Application Reliability

Advanced QA for Core Banking Applications

*Delivering to Business success through
innovation, for successful business outcomes*

Yethi has delivered over

700+ projects *for*
130+ clients *across*
30+ countries.

Quick turnarounds in the BFSI sector are essential for security, regulatory compliance, and successful digital transformations. But in a highly complex ecosystem of applications, relying on efficacy and reliability while meeting the rising demand of tech-savvy customers can remain under the scanner. Yethi Consulting ensures consistent performance and reliability that meet your business needs aligned with strategic roadmaps.

Navigating the challenges across the transformation journey

*Expertise in delivering end-to-end validation of **multisystem & multi-Integrated** environments.*

approach to ensure limited disruptions, quality business processes and performance testing confirm business operations' success. The integration landscape is becoming increasingly complex as banks look for more flexible and agile ways to do business, simultaneously lowering costs and risks.

Modern banks are enhancing their digital capabilities and embracing a digital-first approach in a big way to meet changing customer banking approaches and drive a growth-centred transformation. However, massive investments in Core Banking transformation to support next-generation banking services also have a downside for connected systems and processes. As banks opt for a more cloud-based and configuration-driven

Elevating your Quality Assurance approach for your Core Banking Applications: Why Choose Yethi?

**Best in Quality
Assurance &
Testing Platforms**

Today, Yethi Consulting plays a significant role with its clients towards business success, both early in the transformation stage through its expertise and business operations collaboration, while ensuring these requirements align with business expectations during execution.

Yethi, with its consulting expertise, brings Quality Assurance expertise and a testing automation practice driven by proprietary IP codeless test automation solution RTA solutions, services and comprehensive test case repositories that support multiple vendor platforms, processes and functional areas to ensure a successful transformation that is line with expected business outcomes.

Expertise across CBS platforms and versions

Legacy core systems make it difficult for Banks to integrate third-party systems and applications while modernizing their existing systems.

We bring Quality Assurance expertise over a diverse range of banking applications, supporting innovation across Core Banking Systems, Lending, Trade Finance, Digital banking, Payments, CRM, Workflow Systems and more with zero to no disruptions to your surrounding applications.

CBS Platform Expertise

- FLEXCUBE (Version 10.X – 14.X)
- Finacle (Version 7.x to 10.x.x)
- Temenos (Version R18, R19, R20)
- Intellect
- FIS Profile
- ICS BaNCS
- TCS BaNCS
- Marvel

Extensive Testing Capabilities

Testing the performance and functionality of various systems to ensure that they run smoothly and in sync with other applications is crucial. However, the quality assurance process has many pitfalls – flaky tests, excessive developer rework and wait time, frequent context switching, limited parallel testing, and high infrastructure costs.

At Yethi, we have designed a testing framework with adequate test strategies that address these issues and give you the benefits of time and cost reduction. With end-to-end testing of the CBS platform, we help you enhance customer experience and gain high ROI. Our testing frameworks are carefully designed with a focus on business processes – to reduce operational, financial, and reputational risks and provide comprehensive validation of the entire business process.

Successful Automation of Finacle CBS

*Yethi spearheaded the successful automation of Finacle CBS for a prominent European bank's operations in China. Our meticulous test protocols ensured unwavering consistency, agility, and precision right from the project's inception. With the help of Tenjin, the bank was able to **reduce testing efforts by 70%, time by 60%, and cost by 70%.***

Our comprehensive and end-to-end suite of services includes

Functional Testing

(acceptance testing, integration testing, and regression testing)

Non-functional Testing

(validation testing, vulnerability assessment and penetration testing, data migration audits)

Testing Center of Excellence

(optimize the use of existing QA resources to meet your business objectives)

Core Banking Transformation

(testing for digital transformation/upgrades, BAU testing)

Tenjin Based Automation

(plug-and-play solution with a robotic UI discovery engine that customizes testing)

People and Expertise

The Quality Assurance process of an enterprise, no matter how big or small it requires a strategic test advisory approach. A sufficient QA approach can improve the quality of the products and services, and reduce the release time to market while controlling the cost of QA process.

At Yethi, our expert advisory body can help you on forming the test strategies, process improvements, automation framework, implementations and changes, so that you can align with your business requirement and move on to the next level of QA process.

Our consultants are domain-focused and understand banking processes at a granular level, thereby transcending the role of mere 'testing resources.' Our test protocols can effectively verify whether your software aligns with your bank's business process requirements.

Our Test Assets

Seamless Transition from NBFC to Full-Fledged Bank

Using the Tenjin Test Automation suite, Yethi helped the successful transformation of an Indian NBFC with 300 branches and assets worth \$1.6 billion into a full-fledged bank. We carried out consistent and repeatable software testing for 20+ technology platforms that would have to change in response to market and regulatory forces.

Our ready-to-use comprehensive test case repository of over a million reusable test assets ensures that our testing capabilities are nuanced. The test repository encompasses different stages of the life cycle of a product/process. Further, our combined experience of working with and validating CBS apps is collated in a query-able repository of knowledge. Our test assets are easy-to-use and easy-to-integrate across geographies and banks. We address pain points effectively, fast track testing practice, reduce time and effort for CBS platform testing.

1 Mn + Test Cases. 50+ BFSI Scenarios.

Tenjin™

Industry's Leading Test Automation Solution

Plug and Play Test Automation Solution

Seamless test automation-integration made possible through pre-configured Tenjin™ bots readily available for off-the-shelf banking applications, that can be further easily extended to other applications in the ecosystem. Lesser automation gestation period results in reduced testing cycle & faster time-to-market.

Yethi intellectual property, Tenjin™, is a codeless, auto-adaptive, and agile test automation solution, tailor-made for the banking industry. Tenjin™ is an end-to-end test execution and Management solution for all major CBS platforms.

Tenjin™ Test Manager

End-to-end test management solution that manages and sorts databases ease for all major CBS platform

Tenjin™ AI

Designed for smart selection of test cases from available test repositories applying AI technology

Tenjin™ Enterprise

Robotic codeless test automation solution web, mobile, API that facilitates test automation of complex banking application

Tenjin™ Vault

Ready-to-use and implement repository consisting of over 1 million test cases specific to CBS and others

Tenjin™ Online

The world's most advanced cloud testing suite covering a wide gamut of capabilities - test life cycle management, codeless for web, mobile & API
