

6 STAGES OF TEST AUTOMATION STRATEGY

SETTING A GOAL

Defining the scope of the project such as timelines, milestones, requirements, etc.

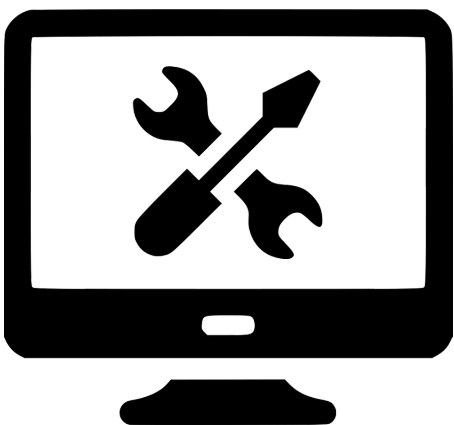

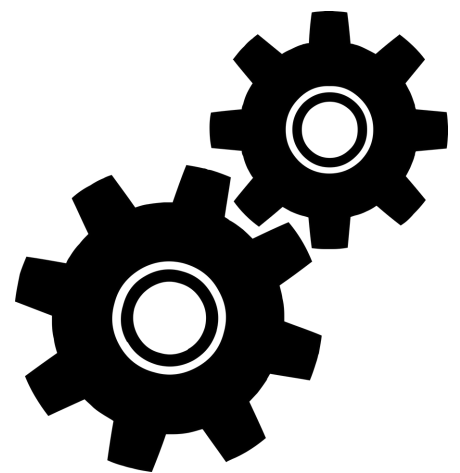

PLANNING TEST APPROACH

Analyzing the feasibility of automation and selecting the relevant test case.

FRAMEWORK SELECTION

Setting up a stable and predictable test environment by identifying the requirements.

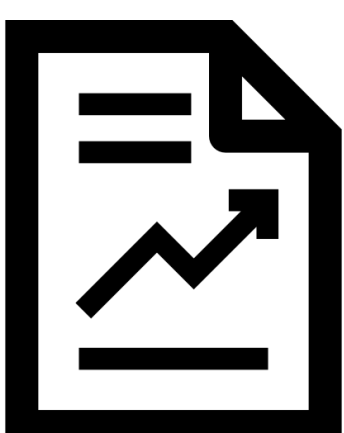

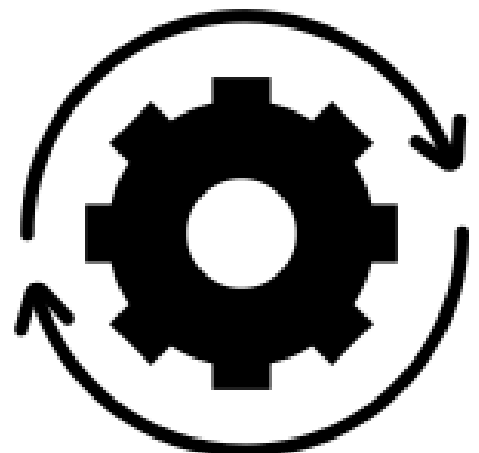

TESTING TOOL SELECTION

Identify the right tool that fits best for project requirement and budget.

TEST CASE EXECUTION

Executing test cases that were previously written. This step includes - Processes, Technology, and Roles.

REPORT ANALYSIS

Analyzing reports and resolving the failed test cases.
